

Inspectors Global Footprint

Above and below water inspection, repair and maintenance services, with an unrivalled global reach.

Inspectors Global Footprint: an overview

As a leader in the provision of above and below water inspection, repair and maintenance services, SeaTec offers an unrivalled global reach, even during times of travel restrictions and uncertainty.

For ship owners and managers who are unable to inspect their vessels, SeaTec can utilise its global footprint to help customers meet their KPIs. These services will be available at a competitive price during the coronavirus crisis, providing value for money in addition to speedy response.

SeaTec's global solutions

SeaTec's 24/7 operations centre, launched last year, can further support customers whose vessels require repairs and maintenance. Through a single email address and phone number, SeaTec can respond quickly to enquiries, finding a solution that benefits customers, their vessel and their business.

Our global reach

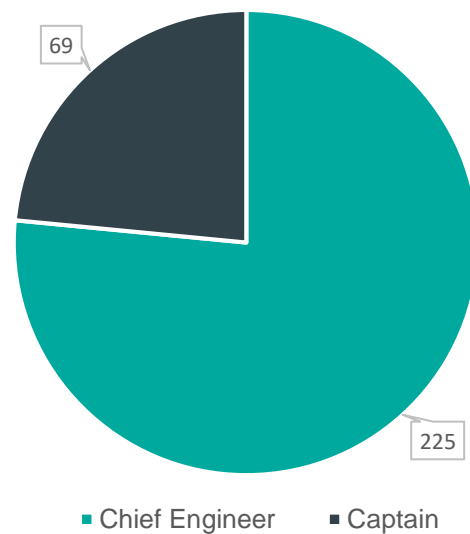

A map of our global reach can be viewed on our [site](#), split by country.
